[Cherokee medicine, colonial germs : an indigenous nation's fight against smallpox, 1518-1824](#)

- **Creator:** Kelton, Paul, author.
- **Subject:** Cherokee Indians -- Diseases -- History; Smallpox -- Southern States -- History; Cherokee Indians -- Medicine -- History; Cherokee Indians -- Colonization -- Health aspects -- History; Smallpox vaccine -- Southern States -- History
- **MESH subjects:** Indians, North American -- Southeastern United States -- History; Smallpox -- Southeastern United States -- History; Colonialism -- Southeastern United States -- History; History, 16th Century -- Southeastern United States; History, Modern 1601- -- Southeastern United States; Smallpox Vaccine -- Southeastern United States -- History
- **Description:** "How smallpox, or Variola, caused widespread devastation during the European colonization of the Americas is a well-known story. But as historian Paul Kelton informs us, that's precisely what it is: a convenient story. In Cherokee Medicine, Colonial Germs Kelton challenges the "virgin soil thesis," or the widely held belief that Natives' lack of immunities and their inept healers were responsible for their downfall. Eschewing the metaphors and hyperbole routinely associated with the impact of smallpox, he firmly shifts the focus to the root cause of indigenous suffering and depopulation - colonialism writ large; not disease." -- dust jacket.
- **Contents:** Arrival -- Response -- War -- Revolution -- Vaccine.

[Flu : the story of the great influenza pandemic of 1918 and the search for the virus that caused it](#)

- **Creator:** Kolata, Gina Bari, 1948-
- **Subject:** Influenza -- History -- 20th century
- **Description:** The fascinating, true story of the world's deadliest disease. In 1918, the Great Flu Epidemic felled the young and healthy virtually overnight. An estimated forty million people died as the epidemic raged. Children were left orphaned and families were devastated. As many American soldiers were killed by the 1918 flu as were killed in battle during World War I. And no area of the globe was safe. Eskimos living in remote outposts in the frozen tundra were sickened and killed by the flu in such numbers that entire villages were wiped out. Scientists have recently rediscovered shards of the flu virus frozen in Alaska and preserved in scraps of tissue in a government warehouse. The author unravels the mystery of this lethal virus with the high drama of a great adventure story. Delving into the history of the flu and previous epidemics, detailing the science and the latest understanding of this mortal disease, she addresses the prospects for a great epidemic recurring, and, most important, what can be done to prevent it.
- **Contents:** Prologue -- 1. The plague year -- 2. A history of disease and death -- 3. From sailors to swine -- 4. A Swedish adventurer -- 5. Swine flu -- 6. A litigation nightmare -- 7. John Dalton's eyeballs -- 8. An incident in Hong Kong -- 9. From Alaska to Norway -- 10. Mysteries and hypotheses -- Epilogue -- Acknowledgments -- Notes -- Index.
- **Other title:** Story of the great influenza pandemic of 1918 and the search for the virus that caused it; Flu (with a new epilogue about avian flu) : the story of the great influenza pandemic of 1918 and the search for the virus that caused it
- **Publisher:** New York : Simon & Schuster

[Plagues and epidemics : infected spaces past and present](#)

- **Contributor:** Herring, Ann, 1951-; Swedlund, Alan C.
- **Subject:** Epidemics -- History; Plague -- History; Famines -- History; Environmentally induced diseases
- **MESH subjects:** Disease Outbreaks -- history; Communicable Diseases -- history; Starvation -- history

- **Genre:** Congresses.
- **Description:** "Until recently, plagues were thought to belong in the ancient past. Now there are deep worries about global pandemics. This book presents views from anthropology about this much publicized and complex problem. The authors take us to places where epidemics are erupting, waning, or gone and to other places where they have not yet arrived, but where a frightening story-line is already in place. They explore public health bureaucracies and political arenas where the power lies to make decisions about what is, and is not, an epidemic. They look back into global history to uncover disease trends and look ahead to a future of expanding plagues within the context of climate change. The chapters are written from a range of perspectives, from the science of modelling epidemics to the social science of understanding them. Patterns emerge when people are engulfed by diseases labeled as epidemics but which have the hallmarks of plague. There are cycles of shame and blame, stigma, isolation of the sick, fear of contagion, and end-of-the-world scenarios. Plague, it would seem, is still among us"-- Provided by publisher.
- **Contents:** Plagues and epidemics in anthropological perspective / D. Ann Herring and Alan C. Swedlung - Ecosyndemics : global warming and the coming plagues of the twenty-first century / Merrill Singer -- Pressing plagues : on the mediated communicability of virtual epidemics / Charles L. Briggs -- On creating epidemics, plagues and other wartime alarms and excursions : enumerating versus estimating civilian mortality in Iraq / James Trostle -- Avian influenza and the third epidemiological transition / Ron Barrett -- Deconstructing an epidemic : cholera in Gibraltar / Lawrence A. Sawchuk -- The end of plague : TB in New Zealand / Judith Littleton, Julie Park and Linda Bryder / Epidemics and time : influenza and tuberculosis during and after the 1918-19 pandemic / Andrew Noymer -- Everyday mortality in the time of plague : ordinary people under extraordinary circumstances in Massachusetts before and during the 1918 flu epidemic -- Alan C. Swedlund -- The coming plague of avian influenza / D. Ann Herring and Stacy Lockerbie -- Past into present : history and the making of knowledge about HIV/AIDS and Aboriginal people / Mary-Ellen Kelm -- Accounting for epidemics : mathematical modeling and anthropology / Steven M. Goodreau -- Social inequalities and dengue transmission in Latin America / Arachu Castro, Yasmin Khawja, James Johnston -- From plague, an epidemic comes : recounting disease as contamination and configuration / Warwick Anderson -- Making plagues visible : yellow fever, hookworm, Chagas Disease, 1900-1950 / Ilana Löwy -- Malaria eradication's metaphors in cold war Mexico / Marcos Cueto -- 'Steady with custom' : mediating HIV prevention in the Trobriand Islands, Papua New Guinea / Katherine Lepani -- Explaining kuru : three ways to think about an epidemic / Shirley Lindenbaum .

[The burdens of disease : epidemics and human response in western history](#)

- **Creator:** Hays, J. N., 1938-
- **Subject:** Epidemics -- History; Epidemieën; Ziekte; Pandemie; Armoede; Tuberculose; Cholera; Geschichte Anfänge-2000; Epidemie
- **MESH subjects:** Disease Outbreaks -- history -- Americas; Disease Outbreaks -- history -- Europe; Western World -- history -- Americas; Western World -- history -- Europe
- **Description:** In this sweeping approach to the history of disease, the author, a historian chronicles perceptions and responses to plague and pestilence over two thousand years of Western history. He frames disease as a multidimensional construct, situated at the intersection of history, politics, culture, and medicine, and rooted in mentalities and social relations as much as in biological conditions of pathology. He shows how diseases affect social and political change, reveal social tensions, and are mediated both within and outside the realm of scientific medicine.
- **Contents:** The western inheritance : Greek and Roman ideas about disease -- Medieval disease and responses -- The great plague pandemic -- New diseases and transatlantic exchanges -- Continuity and change : magic, religion, medicine, and science, 500-1700 -- Disease and the enlightenment -- Cholera and sanitation -- Tuberculosis and poverty -- Disease, medicine, and western imperialism -- The scientific view of disease and the triumph of professional medicine -- The apparent end of epidemics -- Disease and power.

- **Genre:** Biography.
- **Description:** " It is no exaggeration to say that the Hankey, a small British ship that circled the Atlantic in 1792 and 1793, transformed the history of the Atlantic world. This extraordinary book uncovers the long-forgotten story of the Hankey, from its altruistic beginnings to its disastrous end, and describes the ship's fateful impact upon people from West Africa to Philadelphia, Haiti to London. Billy G. Smith chased the story of the Hankey from archive to archive across several continents, and he now brings back to light a saga that continues to haunt the modern world. It began with a group of high-minded British colonists who planned to establish a colony free of slavery in West Africa. With the colony failing, the ship set sail for the Caribbean and then North America, carrying, as it turned out, mosquitoes infected with yellow fever. The resulting pandemic as the Hankey traveled from one port to the next was catastrophic. In the United States, tens of thousands died in Philadelphia, New York, Boston, and Charleston. The few survivors on the Hankey eventually limped back to London, hopes dashed and numbers decimated. Smith links the voyage and its deadly cargo to some of the most significant events of the era-the success of the Haitian slave revolution, Napoleon's decision to sell the Louisiana Territory, a change in the geopolitical situation of the new United States-and spins a riveting tale of unintended consequences and the legacy of slavery that will not die"-- Provided by publisher.
- **Contents:** The Hankey -- The British colonists -- West Africa -- Cross-cultural negotiations -- Death in Bolama -- Grumettas and the final days of the "Canabacs' chickens" -- Yellow Jack comes to the Caribbean -- Calamity in the United States capital -- Journal of the plague months -- Epilogue: The living and the dead -- The legacy of the Hankey -- Glossary of people and places of West Africa.

[AIDS in the world](#)

- **Contributor:** Mann, Jonathan M.; Tarantola, D.; Netter, Thomas W., 1949-
- **Subject:** SIDA = Syndrome immuno-déficitaire acquis; AIDS (Disease) -- Epidemiology; World health; AIDS; Epidémiologie; Humans AIDS
- **MESH subjects:** Acquired Immunodeficiency Syndrome; Global Health
- **Description:** AIDS in the World is the first analysis of the global confrontation with AIDS. By explaining the roots of individual and collective vulnerability to the pandemic, it sets the stage for a revolutionary personal, community, and international response to the AIDS crisis. This book provides the data, projections, and information critical to analyzing where we are and where we are going - information basic to a new global vision for a world confronting AIDS. According to this comprehensive, independent study by the Global AIDS Policy Coalition, worldwide efforts to bring the epidemic of human immunodeficiency virus (HIV) and AIDS under control are now at a critical juncture. AIDS in the World projects that by 1995 nearly 20 million people will be infected with HIV, and 6.4 million adults and

children will develop AIDS; by the year 2000, between 38 and 110 million adults and as many as 10 million children will be infected with HIV and up to 24 million adults will develop AIDS. Yet as the pandemic worsens, the global response is falling behind. AIDS in the World examines a wide range of critical issues such as AIDS and sexual behavior, human reproduction, sexually transmitted diseases, dementia, drug injecting behavior, the impact of the media, and the status of governmental and nongovernmental responses to the pandemic. It projects a vision of the dimension, shape, and impact of the pandemic, and the societal response - a vision without which the world response to AIDS may be too little, too late. The information presented in AIDS in the World is of value to professionals working on AIDS and related issues, individuals infected with HIV and AIDS, and all who are interested in and concerned with AIDS and with global health.

[The origins of AIDS](#)

- **Creator:** Pepin, Jacques, 1958-
- **Subject:** HIV infections -- Africa; HIV infections -- Etiology; AIDS (Disease) -- Africa; Emerging infectious diseases -- Africa; AIDS; Epidemie; HIV-Infektion; Krankheitsübertragung; Medizinische Versorgung; Soziokultureller Faktor; Geschichte 1960-1990

- **MESH subjects:** HIV Infections -- etiology -- Africa; HIV Infections -- history -- Africa; Acquired Immunodeficiency Syndrome -- history -- Africa; Communicable Diseases, Emerging -- history -- Africa; Disease Vectors -- Africa; HIV-1 -- pathogenicity -- Africa; History, 20th Century -- Africa
- **Description:** "This compelling new account traces the origins and development of the most dramatic and destructive disease epidemic of modern times. Jacques Pepin looks back to the early twentieth-century events in Africa that triggered the emergence of HIV/AIDS and the subsequent evolution and transmission of the disease before it was first officially identified in 1981. The book focuses on the specific circumstances in Leopoldville, the capital of the Belgian Congo, where urbanization, the spread of prostitution, and medical interventions to control the incidence of tropical diseases interconnected to fuel the communication of HIV-1 in the 1960s, as the country struggled to adapt to its newfound independence. With a unique synthesis of historical, political and medical elements, this book adds a coherent and necessary historical perspective to recent molecular studies of the chronology of the HIV/AIDS pandemic"--Provided by publisher.

[Spillover : animal infections and the next human pandemic](#)

- **Creator:** Quammen, David, 1948-
- **Subject:** Animals as carriers of disease
- **MESH subjects:** Zoonoses -- etiology; Communicable Diseases, Emerging -- etiology; Pandemics
- **Genre:** Popular Works.
- **Description:** This work examines the emergence and causes of new diseases all over the world, describing a process called "spillover" where illness originates in wild animals before being passed to humans and discusses the potential for the next huge pandemic. The emergence of strange new diseases is a frightening problem that seems to be getting worse. In this age of speedy travel, it threatens a worldwide pandemic. We hear news reports of Ebola, SARS, AIDS, and something called Hendra killing horses and people in Australia; but those reports miss the big truth that such phenomena are part of a single pattern. The bugs that transmit these diseases share one thing: they originate in wild animals and pass to humans by a process called spillover. As globalization spreads and as we destroy the ancient ecosystems, penetrating ever deeper into the furthest reaches of the planet, we encounter strange and dangerous infections that originate in animals but can be transmitted to humans. It is reckoned that at least 60% of our infectious diseases derive from animals. Diseases that were contained are being set free and the results are potentially catastrophic. The author tracks this subject around the world. He recounts adventures in the field, netting bats in China, trapping monkeys in Bangladesh, stalking gorillas in the Congo, with the world's leading disease scientists. He takes the reader along on this quest to learn how, where from, and why these diseases emerge, and he asks the terrifying question: What might the next big one be?
- **Contents:** Pale horse -- Thirteen gorillas -- Everything comes from somewhere -- Dinner at the rat farm -- The deer, the parrot, and the kid next door -- Going viral -- Celestial hosts -- The chimp and the river-- It depends.

[The viral storm : the dawn of a new pandemic age](#)

- **Creator:** Wolfe, Nathan.
- **Subject:** Viruses; Virus diseases; Molecular evolution; Human evolution; SCIENCE / Life Sciences / General
- **Description:** "Dynamic young Stanford biologist Nathan Wolfe reveals the surprising origins of the world's most deadly viruses, and how we can overcome catastrophic pandemics. In *The Viral Storm*, award-winning biologist Nathan Wolfe tells the story of how viruses and human beings have evolved side by side through history; how deadly viruses like HIV, swine flu, and bird flu almost wiped us out in the past; and why modern life has made our species vulnerable to the threat of a global pandemic. Wolfe's research missions to the jungles of Africa and the rain forests of Borneo have earned him the nickname "the Indiana Jones of virus hunters," and here Wolfe takes readers along on his groundbreaking and often dangerous research trips--to reveal the surprising origins of the most deadly diseases and to explain the role that viruses have played in human evolution. In a world where each new outbreak seems worse than the one before, Wolfe points the way forward, as new technologies are brought to bear in the most remote areas of the world to neutralize these viruses and even harness their power for the good of humanity. His provocative vision of the future will change the way we think about viruses, and perhaps remove a potential threat to humanity's survival"-- Provided by publisher.; "The "Indiana Jones" of virus hunters reveals the complex interactions between humans and viruses, and the threat from viruses that jump from species to species"--Provided by publisher.

[Illness as narrative](#)

- **Creator:** Jurecic, Ann, 1962-
- **Subject:** American literature -- 20th century -- History and criticism; Diseases in literature; American literature; Autobiography -- Authorship; Diseases; Literature; 1900 - 1999; Criticism, interpretation, etc
- **MESH subjects:** Medicine in Literature; Personal Narratives as Topic; Sick Role; Writing
- **Description:** "For most of literary history, personal confessions about illness were considered too intimate to share publicly. By the mid-twentieth century, however, a series of events set the stage for the emergence of the illness narrative. The increase of chronic disease, the transformation of medicine into big business, the women's health movement, the AIDS/HIV pandemic, the advent of inexpensive paperbacks, and the

rise of self-publishing all contributed to the proliferation of narratives about encounters with medicine and mortality. While the illness narrative is now a staple of the publishing industry, the genre itself has posed a problem for literary studies. What is the role of criticism in relation to personal accounts of suffering? Can these narratives be judged on aesthetic grounds? Are they a collective expression of the lost intimacy of the patient-doctor relationship? Is their function thus instrumental--to elicit the reader's empathy? To answer these questions, Ann Jurecic turns to major works on pain and suffering by Susan Sontag, Elaine Scarry, and Eve Sedgwick and reads these alongside illness narratives by Jean-Dominique Bauby, Reynolds Price, and Anne Fadiman, among others. In the process, she defines the subgenres of risk and pain narratives and explores a range of critical responses guided, alternately, by narrative empathy, the hermeneutics of suspicion, and the practice of reparative reading. *Illness as Narrative* seeks to draw wider attention to this form of life writing and to argue for new approaches to both literary criticism and teaching narrative. Jurecic calls for a practice that's both compassionate and critical. She asks that we consider why writers compose stories of illness, how readers receive them, and how both use these narratives to make meaning of human fragility and mortality." --from publisher.
